QI-Colossus2-V2.2-ENG 10/2018

Included with Colossus 2

Included with Colossus 2:

- Colossus 2 recorder: H.264 high definition video recorder, PCI Express x1/x16
- HDMI cable
- Hauppauge A/V adapter for Component video
- Component Video cable set to connect to your set top box
- IR blaster cable to control the channels on your set top box
- Hauppauge Capture (download)
- WinTV v8 application (download)
- WinTV v8 Activation Code (printed on a card)

Overview

The Hauppauge Colossus 2 is an internal PCI Express board for desktop PCs, and records video in HD from a cable or satellite set top box, PC video (through the PC's HDMI video output port) or a video game console such as the Xbox One, Playstation 4 and other HDMI equipped game consoles.

Colossus 2 is essentially the HD PVR 2 model 1512 on an internal PCI Express board. records video in HD from a cable or satellite set top box, PC or video game console. There are two video recording applications which come with Colossus 2:

- WinTV v8 is used to schedule TV recordings from a set top box. You can also use WinTV v8 to watch HD TV in a window or full screen on your PC.
- Hauppauge Capture was designed to record video from game consoles and has a convenient one-click upload to YouTube plus includes Hauppauge's StreamEez to stream on Twitch and YouTube.

Colossus 2 recordings are made onto a computer's hard drive in a compressed H.264 format. It records from HDMI or Component Video (also called YPrPb). You can also record S-Video or composite video using and optional A/V cable (you can purchase this on the Hauppauge Webstore). It will record at 1080p30, 720p or 480p at datarates from 1Mbit/sec up to 13.5Mbits/sec.

Note: if you are recording from a cable or satellite box, it is recommended that you use Component Video. Many cable and satellite set top boxes (though not all) do not allow recording from the HDMI port.

Audio can be supplied to the Colossus 2 with HDMI, or from stereo audio connectors on the Hauppauge AV cable or an optical audio cable. Audio can be recorded through HDMI and optical audio as surround sound (AC3) if your video source includes surround sound audio.

There are two types of Colossus 2 recording formats:

TS: this is a native H.264 format used by WinTV v8 and Hauppauge Capture. TS files are often used to burn Blu-ray discs. The TS files recorded with Colossus 2 can be edited

with Sony Vegas (all versions) and Adobe Premiere

MP4: this is similar to the TS file but has an index at the beginning of the file. In the Edit tab of Hauppauge Capture, click 'Export to MP4' to create an MP4 file without losing video quality.

Installing the Colossus 2

Step 1: Install the Colossus 2 in a PCle slot on your PC

Power down your PC, and then install Colossus 2 in any PCle x1 or x16 slot.

Step 2: Boot into Windows on your PC

Turn the power on and boot your Windows PC. Colossus 2 works with laptops or desktop PCs with Windows 10, 8 and 7.

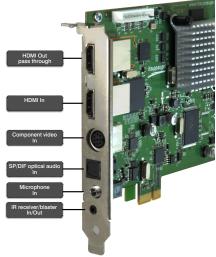

Note: you will not see video on your PC screen or on your TV set until you install the Hauppauge Capture application.

Step 3: Connect the Colossus 2 audio and video cables

3a. Component Video connection (also called YPrPb or YCrCb)

If you are using a cable or satellite set top box, you can use Component video to record.

The Component Video cable set (supplied) has Red/Green/Blue video and White/Red audio connectors at the end. Plug these colored cables into the corresponding Green/Blue/Red (video) and White/Red (audio) RCA connectors

of the Hauppauge A/V adapter.

Note: HDMI might or might not be able to record, depending upon your TV provider.

Plug the Hauppauge A/V adapter into the AV In connector on the back of the Colossus 2.

Plug the other end of the **Component Video cable set** into the YPrPb or Component video output of your set top box (Red/Green/Blue connectors). Now connect the Red and White audio connectors.

3b. HDMI connection

If you want to record from a game console, you can use HDMI as long as HDCP is disabled on your game console.

Connect your PC or game console to Colossus 2 using HDMI. Plug the HDMI cable (supplied) into the HDMI out of your PC's graphics card or your game console into the **HDMI in** on the Colossus 2.

Note: your PC or game console must be set to 1080p, 720p or 480p at 50 or 60Hz. Please see this page for setting up the video and audio on a PC gaming system: www.hauppauge.com/pcsetup

Step 4: Install the Colossus 2 Windows driver and applications

There are two applications provided with the Colossus 2: Hauppauge Capture and WinTV v8.

- Hauppauge Capture is used to record, trim, upload and stream your HD video.
- WinTV v8 allows you to watch HD video in a window (or full screen) on your PC screen.
 You can also record a video manually or set up a scheduled automatic recording in high definition from a cable or satellite TV box.

For more information, please see the Hauppauge Colossus 2 support page: http://www.hauppauge.com/pages/support/support hdpvr2.html

4a: Download and install Hauppauge Capture

You can find Hauppauge Capture at: www.hauppauge.com/capture Hauppauge Capture is normally downloaded to your Downloads directory. It will be called hauppaugecapture_1_1_zzzzz.exe where zzzzz is the version number.

Run this file to start the installation.

4b: Download and install WinTV v8 application

The WinTV v8 application includes a TV scheduler which allows you to record TV programs from a cable or satellite set top box.

You will need the WinTV v8 Activation Code during the installation. You should find this code printed on the Activation Code insert card inside the Colossus 2 box.

Once complete, you will be asked to restart. Please do so.

Using WinTV v8 to watch and record TV programs from your set top box

Please go to our Internet website for instructions on the setup and use of the WinTV v8 application:

www.hauppauge.com/wintv8

Using Hauppauge Capture

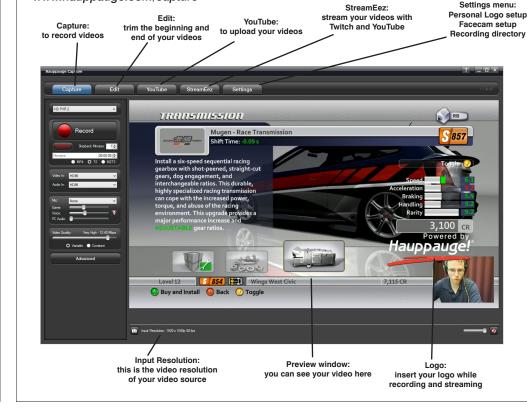

After restarting your PC, you will see the Hauppauge Capture icon on your Windows desktop. Click this icon to start Hauppauge Capture.

For more information on Hauppauge Capture, how-to videos and the latest version of Hauppauge Capture, please look here:

What do the lights on back of Colossus 2 mean?

- Blue light: When Colossus 2 is powered on and the Windows driver is running, the blue light is on. If the blue light is blinking, the Colossus 2 is not 'seen' by your PC.
- Yellow light is on after you start Hauppauge Capture: this is good and means Colossus 2 detects video and you are ready to record. If you do not have a yellow light, then your video source is not being 'seen' by the Colossus 2. If you are recording from a PC gaming system, make sure your graphics card is set to 1080p60 or 720p and the refresh rate is 60Hz. Otherwise, make sure you have set the correct Video and Audio Input.

No video in the Hauppauge Capture preview window:

Step 1: Make sure Colossus 2 is listed in the Capture tab. If not, then please check your USB cables and make sure the blue light is on on the front of Colossus 2. If you cannot see Colossus 2 listed, reinstall Hauppauge Capture. Power cycle the Colossus 2 and reboot your PC after reinstalling the drivers.

Step 2: Check the video mode of your console. It must be set at either 1080p60 or 720p. If you are using a PC game system, check our website at: www.hauppauge.com/pcsetup

Step 3: Check your cables. Remove each cable and make sure it's firmly reseated into each device you are using. If using HDMI cables, try swapping the HDMI cables.

Step 4: Check the Video input setting. If the Video input setting is wrong, you will get a black preview window. Set Video input to Component video for a cable or satellite box and HDMI for all other devices. Is the yellow light on on the front of Colossus 2? If the yellow light is not on, then either you have the wrong Video input source set or your game console is not turned on.

Step 5: If using HDMI, verify your source device does not use HDCP copy protection. If your video source has HDCP copy protection, you will see a black screen.

Step 6: If the yellow light is on after you start Hauppauge Capture and you still see a black preview window, try recording some video. If you can successfully playback a recording but you cannot see live video in the Preview window, enable hardware acceleration (select "hardware acceleration" in the Settings menu in Hauppauge Capture).

If capture fails, it is likely something is wrong with the video input to Colossus 2. This could be a broken or loose video cable or you plugged the cables into the wrong connector.

Pass through video problems

No video on my TV set

Open Hauppauge Capture and verify the correct Video input is selected. Video and audio input must be set initially for passthrough to work (if you power cycle the Colossus 2, it may revert to its default setting and will need to be set again). Also, check the video mode on your PS3 or Xbox 360. The video mode should be 1080p or 720p.

No video on my TV set but I can see video in the Capture tab

Check that the HDMI cable from the Colossus 2 (HDMI out) is connected to your TV monitor and the TV is set to the correct HDMI port if multiple are available on yourTV. Try changing the output resolution from your game console. Some TV monitors may not support all HDMI output resolutions.

Wrong colors with Component Video

Check the Component video cable: unplug and replug the Red, Green and Blue video cables. Make sure the Red audio cable is not plugged into the Red video cable.
